Bevcon Beer and Beverage Systems P/L

Are your draught beer profits going down the drain?

At Bevcon we know that
EVERY. DROP. COUNTS.

The most common causes of draught beer waste

- ✘ Glycol issues – low levels or concentrations
- ✘ Refrigeration - ranging from system overloads to thermostat, pump and compressor issues
- ✘ Inadequate or deteriorated beer line insulation
- ✘ Gas pressure faults – leaks, regulator faults, settings
- ✘ Poor or infrequent line cleaning procedures
- ✘ Beer FOBS not operating properly
- ✘ Inadequate or infrequent tap and coupler maintenance
- ✘ Staff require more training
- ✘ Employee theft and give-aways to friends

Preventative Maintenance is the best way to ensure that your beer system operates at maximum efficiency.

This means **better beer** for your customers and **more profits** for your venue.
